

PATIENT-CENTRIC INVENTORY MANAGEMENT

Private Hospitals and Day Surgeries are highly dependent on efficient and transparent processes to treat a high number of patients while maintaining highest clinical standards. h-trak provides a solution to simplify and automate the tasks for inventory, purchasing billing and reporting. h-trak does this by providing a patient-centric inventory management solution designed from the ground up for the unique requirements of surgical or interventional departments within acute Private Hospitals and Day Surgeries. It includes a surgical preference card management system and integrates with the hospital's purchasing, finance, patient administration and billing systems to ensure automatic and accurate billing, purchasing and cost reporting management.

h-trak is a SaaS (Software as a Service) solution which is the most cost effective and efficient means of providing software, via standard internet browsers. It can scale up to the very large corporate hospital providers but is also suitable for smaller independent Private Hospitals.

h-trak is used in more than 70 hospitals across Australia, Germany, UK and New Zealand, 52 of those in Australia. The system was established in 2002 in Australia and has been delivering benefits to our customers for 20 years. You can contact us at info@prospitalia-htrak.com

Clinical

- Patient safety through accurate traceability of products to patient
- Preference Card management to automate end-to-end processes from setup to usage
- Automatic detection of expired devices from barcode scanning of products
